STAT 231: Problem Set 2B

Lorraine Oloo

due by 5 PM on Friday, March 5

Series B homework assignments are designed to help you further ingest and practice the material covered in class over the past week(s). You are encouraged to work with other students, but all code must be written by you and you must indicate below who you discussed the assignment with (if anyone).

Steps to proceed:

- 1. In RStudio, go to File > Open Project, navigate to the folder with the course-content repo, select the course-content project (course-content.Rproj), and click "Open"
- 2. Pull the course-content repo (e.g. using the blue-ish down arrow in the Git tab in upper right window)
- 3. Copy ps2B.Rmd from the course repo to your repo (see page 6 of the GitHub Classroom Guide for Stat231 if needed)
- 4. Close the course-content repo project in RStudio
- 5. Open YOUR repo project in RStudio
- 6. In the ps2B.Rmd file in YOUR repo, replace "YOUR NAME HERE" with your name
- 7. Add in your responses, committing and pushing to YOUR repo in appropriate places along the way
- 8. Run "Knit PDF"
- 9. Upload the pdf to Gradescope. Don't forget to select which of your pages are associated with each problem. You will not get credit for work on unassigned pages (e.g., if you only selected the first page but your solution spans two pages, you would lose points for any part on the second page that the grader can't see).

If you	discussed	this	assignment	with	any	of your	peers,	please	list
who he	ere:								

ANSWER:

MDSR Exercise 4.14 (modified)

Use the Pitching data frame from the Lahman package to identify every pitcher in baseball history who has accumulated at least 300 wins (W) and at least 3,000 strikeouts (SO).

a. How many pitchers meet this criteria?

ANSWER: 10 pitchers meet this criteria

```
library(Lahman)
data("Pitching")
```

```
Pitching1 <- select(Pitching, playerID, W, S0)

Pitching2<- aggregate(cbind(W, S0) ~ playerID, data = Pitching1, sum)

Pitching3<- filter(Pitching2, W > 300 & S0 > 3000)

Pitching3
```

```
## playerID W S0

## 1 carltst01 329 4136

## 2 clemero02 354 4672

## 3 johnsra05 303 4875

## 4 johnswa01 417 3509

## 5 maddugr01 355 3371

## 6 niekrph01 318 3342

## 7 perryga01 314 3534

## 8 ryanno01 324 5714

## 9 seaveto01 311 3640

## 10 suttodo01 324 3574
```

b. Which of these pitchers had the most accumulated strikeouts? How many strikeouts had he accumulated? What is the most strikeouts he had in one season?

ANSWER: ryanno01 had the most accumulated strikeouts of 5714. The most strikeouts he had in one season is 383.

```
#Maximum strikeout
Pitching4<- filter(Pitching3, S0== max(Pitching3$S0))
Pitching4

## playerID W S0
## 1 ryanno01 324 5714

#player ryanno01 games only
Pitching5<- filter(Pitching, playerID == "ryanno01")
max(Pitching5$S0)</pre>
```

MDSR Exercise 4.17 (modified)

a. The Violations data set in the mdsr package contains information regarding the outcome of health inspections in New York City. Use these data to calculate the median violation score by zipcode and dba for zipcodes in Manhattan. What pattern (if any) do you see between the number of inspections and the median score? Generate a visualization to support your response.

ANSWER: There is a moderate positive assosiation between the number of inspections and the median score.

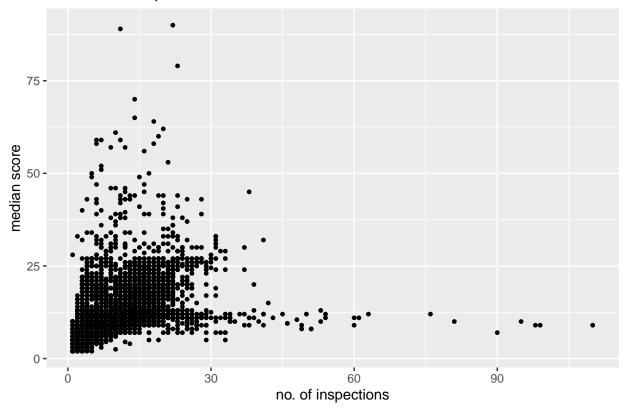

```
data("Violations")
Violations1<- Violations %>% drop_na()

Violation2 <-Violations1 %>%
  filter(boro == "MANHATTAN") %>%
  select(zipcode,dba,score,)%>%
  group_by(zipcode,dba) %>%
  summarise(num_inspections=n(), med_score=median(score))
```

'summarise()' has grouped output by 'zipcode'. You can override using the '.groups' argument.

```
g <- ggplot(data = Violation2, aes(y = med_score, x = num_inspections)) +
    ggtitle("Number of inspections vs the median score")+
    ylab("median score") +
    xlab("no. of inspections")
g + geom_point(size = 1)</pre>
```

Number of inspections vs the median score

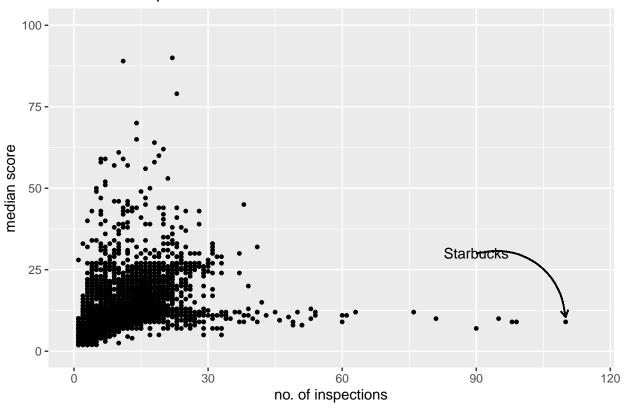

b. In your visualization in part (a), there should be at least a few points that stand out as outliers. For one of the outliers, add text to the outlier identifying what business it is and an arrow pointing from the text to the observation. First, you may want to filter to identify the name of the business (so you know what text to add to the plot).

(Can't remember how to create a curved arrow in ggplot? The answers to this question on Stack Exchange may help. Can't remember how to add text to the plot in ggplot? Check out the text examples with annotate here, or answers to this question that use geom_text.)

STARBUCKS with 110 total inspections and a median of 9.

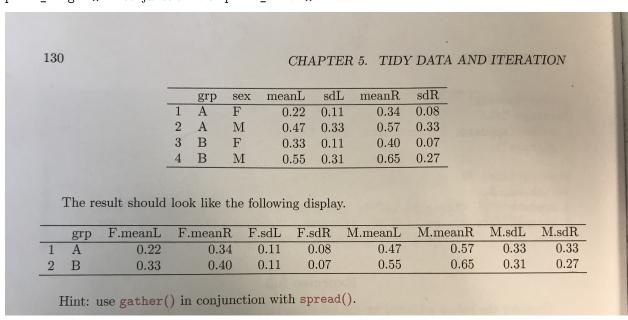

```
) +
scale_color_manual(
    guide = FALSE,
    values = c("black", "#b2d7e9", "darkgray")
) +
ylim(0, 100) + xlim(0, 115)
```

Number of inspections vs the median score

MDSR Exercise 5.7

Generate the code to convert the data frame shown with this problem in the textbook (on page 130, and shown below) to wide format (i.e., the result table). Hint: use gather() in conjunction with spread(); OR pivot_longer() in conjunction with pivot_wider().

```
FakeDataLong <- data.frame(grp = c("A", "A", "B", "B") 
, sex = c("F", "M", "F", "M") 
, meanL = c(0.22, 0.47, 0.33, 0.55) 
, sdL = c(0.11, 0.33, 0.11, 0.31) 
, meanR = c(0.34, 0.57, 0.40, 0.65) 
, sdR = c(0.08, 0.33, 0.07, 0.27))
```

```
FakeDataLong1 <- FakeDataLong %>%
gather("statistics", "value", -c("grp", "sex")) %>%
unite(sex.statistics, c("sex", "statistics"), sep = ".") %>%
arrange(sex.statistics) %>%
spread(key = "sex.statistics", value = "value")
```

PUG Brainstorming

What topics or questions are you interested in exploring related to your PUG theme? Dream big here. Don't worry about whether there is data out there that's available and accessible that you could use to address your questions/topics. Just brainstorm some ideas that get you excited. Then, email your PUG team with your ideas. Title the email "PS2B Brainstorming: PUG [#] [Topic]" and CC me (kcorreia@amherst.edu) on the email. If another PUG member already initiated the email, reply all to their email.

If you don't remember your PUG # and Topic, please see the file "PUGs" on the Moodle page under this week.

If you don't know your PUG members email address, go to the class's Google group conversations (e.g., by clicking the link "Link to Google group conversations" at the top of our Moodle course page). Then, on the navigation panel (left hand side), select "Members".

ANSWER: Do not write anything here. Email your ideas to your PUG team and me in a message titled "PS2B Brainstorming: PUG [#] [Topic]".
